## **DETAILED ACTION**

## Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1, 17, 18, 19, 21 and 22 are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Patent No. 6,366,452 to Wang et al. ("Wang" hereinafter) in view of U.S. Patent No. 4,848,179 to Ubhayakar. Referring to claim 1, Wang discloses a computer controlled display device (40), comprising a flat panel display (14) having an input (not shown, see col. 2, lines 42-45) for receiving display data, a moveable assembly (44) coupled with the display having a cross-sectional area which is substantially less than a cross-sectional area of a display structure (14) of said flat panel display (40). Wang does not disclose the moveably assembly being articulated to provide at least three degrees of freedom of movement for said flat panel display device relative to the base.

Ubhayakar teaches providing a flexi-digit robotic manipulator (see Fig. 2), wherein the manipulator is attached to a base (3) at one end and includes article retaining or holding means (1a) at another end.

It would have been obvious to one having ordinary skill in the art at the time of the invention to modify the moveable assembly of Wang to include a flexi-digit manipulator, as taught by Ubhayakar, since the device of Ubhayakar would provide an Art Unit: 2835

increased amount of flexibility for viewing the flat panel display of Wang, without increasing the amount of desktop space required.

Referring to claims 17 and 18, Wang in view of Ubhayakar disclose a computer controlled display device, wherein the moveable assembly (1) wherein comprises a proximal end (near 1a) and a distal end (near 3), at least one link (5k) disposed near a base (3), and a shape-memory metal shaft (see Fig. 6c of Ubhayakar) disposed within said at least one link, wherein said shape-memory metal shaft comprises nickel-titanium. See col. col. 7, lines 48-49 of Ubhayakar.

Referring to claim 19, Wang in view of Ubhayakar disclose a computer controlled display device, wherein said moveable assembly has one of a data cable and power cable (see col. 9, lines 18-24 of Ubhayakar), tension mechanism (Fig. 6c of Ubhayakar), and an anti-torsion mechanism (see col. 3, lines 27-32 of Ubhayakar).

Referring to claims 21 and 22, Wang in view of Ubhayakar disclose a computer controlled display device further comprising a ferrule (i.e., round end structures, not numbered, shown in Fig. 6c of Ubhayakar) near both the proximal end of the shaft and the distal end of the shaft to maintain tension force applied to the shape-memory metal shaft.

Claim 20 is rejected under 35 U.S.C. 103(a) as being unpatentable over Wang in view of Ubhayakar, and further in view of U.S. Patent No. 5,684,448 to Jacobsen et al. Wang, as modified, discloses the device as substantially claimed, except for the shapememory metal shaft being looped at least once from said proximal end to said distal

Art Unit: 2835

end. Jacobsen teaches provided a shape memory switch, utilizing shape "looped" shaped-memory wire(s). See Fig. 2 and col. 8, lines 15-18.

It would have been obvious to one having ordinary skill in the art at the time of the invention to further modify the moveable assembly of Wang to include a single, looped shape-memory wire or shaft, as taught by Jacobsen, since the single, looped shape-memory device of Jacobsen would reduce the number of shafts or wires in the assembly of Wang, thereby reducing the manufacturing and maintenance costs for the same.

## Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Anthony Q. Edwards whose telephone number is 571-272-2042. The examiner can normally be reached on M-F (7:30-3:00) First Friday Off.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Lynn D. Feild can be reached on 571-272-2800, ext. 35. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
